Re-arrange the sentences into a logical order and insert **appropriate transitions or connectors** to create a coherent paragraph.

Moreover, Nevertheless, Therefore, Thus, Furthermore, For instance, As a result, However, On the other hand, Additionally

- **Jumbled Sentences**

If institutions fail to provide adequate academic guidance and technical support, online learning environments may unintentionally widen existing educational inequalities rather than reduce them. Limited access to reliable internet services and digital devices continues to disadvantage many learners, restricting their ability to participate fully in online courses. Online learning has significantly transformed higher education by reshaping how students access academic content and manage their learning responsibilities. The flexibility of online education allows students to attend lectures and complete assignments according to their personal schedules, particularly benefiting those who must balance studies with work or family commitments. Students living in remote areas can now enroll in well-reputed universities without relocating, gaining opportunities that were previously inaccessible. Flexibility alone does not guarantee academic success, as many learners struggle with self-discipline and time management when academic routines are loosely structured. Online education has expanded access to higher education by removing geographical barriers and increasing institutional reach. Unequal participation in online learning platforms challenges the assumption that digital education is universally accessible.

Rewrite the Paragraph by using appropriate transitions
