

Guidelines for Assignment #1

Expository Writing – CS Stream

Fact-Checking the Fact-Checker: Investigating AI Reliability

65-75 Second Presentation Structure

For the presentation you have 65-75 seconds. Kindly make sure that you follow the given timeframe.

Recommended Structure (65-75 seconds)

You can use a different structure in case your work has other findings that are really interesting and a pattern that you think needs to be discussed and highlighted, you can have a look at that too.

1. Hook + False Claim (10 seconds)

- Open with your name and the specific false claim generated
- Make it engaging/intriguing
- *Example: "I got AI to write an article claiming that smartphones can detect diabetes through touch patterns. Here's what I learned about AI reliability."*

2. Generation Insight (10-15 seconds)

- **Briefly** mention what prompting technique worked
- Focus on ONE surprising discovery about how AI responded
- *Example: "Direct requests failed, but framing it as 'speculative technology' bypassed safety measures" OR "The AI fabricated 4 out of 5 sources with realistic-looking citations."*

3. Most Surprising Finding (25-30 seconds)

Choose **ONE-TWO** of these focus areas (Keep the time in mind):

- **Correction behavior:** Did AI accept corrections? Defend false claims? Revert back?
- **Source fabrication patterns:** What they discovered about fake sources
- **Persistence testing:** Whether corrections held across conversation
- **A surprising AI response pattern** they documented

This should be the most compelling discovery with a specific example.

4. Key Takeaway (15-20 seconds)

- What this means for AI reliability/use
- Personal insight about digital literacy

- Practical implication for their field
- *Example: "This taught me that AI confidence doesn't equal accuracy even when corrected with facts, it reverted to false claims three responses later. This matters for anyone using AI in professional contexts."*

What to AVOID (Due to Time Constraints)

- ✗ Detailed methodology walk-through
- ✗ Listing all claims fact-checked
- ✗ Explaining the entire assignment
- ✗ Reading the source quality matrix
- ✗ Covering all four sections equally

Pro Tips

1. **Practice the timing** - 75 seconds disappears fast
2. **Use specific examples** rather than generalizations ("It fabricated a 2024 Stanford study" vs. "It made up sources")
3. **Lead with your most interesting finding** - don't bury the headline
4. **Make it a story** - what surprised you most in this investigation?
5. **End with impact** - why should the audience care?

Alternative Structures (depending on the findings)

For students who found fascinating correction behavior:

- Hook + Claim (15s) → Generation technique (10s) → Correction testing results (40s) → Implications (15s)

For students who discovered interesting source patterns:

- Hook + Claim (15s) → Source fabrication discovery (45s) → What this reveals (20s)

For students with unexpected AI responses:

- Hook + Claim (15s) → The prompt that worked (10s) → The bizarre AI behavior (35s) → What we learn (20s)
